Fast Floor Screed[®]

mobile screed factory

WE ARE IRELAND'S LEADING FLOOR SCREED CONTRACTOR, WITH AN UNRIVALLED TRACK RECORD OF SUCCESSFULLY COMPLETED FLOWING FLOOR SCREED PROJECTS.

In April 2015 we revolutionised the installation of flowing CE certified Sudanit 280 Alpha Hemihydrate screed with our innovative Mobile Screed Factories. These state-of-the-art machines are fully automated, mobile, computerised batching systems – custom built for us, by Bremat in the Netherlands. One machine is mounted on a ridged truck, making it easily manoeuvrable for site or on-street setup and we run two additional articulated trailer mobile screed factories.

Each Fast Floor Screed Mobile Screed Factory carries our Sudanit 280 Alpha Hemihydrate binder, sand & aggregates and water in separate compartments. The automatic production process ensures materials are precisely weighed, fed to the mixing bin and into the pump for easy, mess-free installation. This ensures the Mobile Screed Factory produces Sudanit 280 Alpha Hemihydrate floor screed to a consistently high quality.

We pride ourselves on best practice, welcoming the new 'BCAR' regulations which stipulate quality workmanship to exacting standards and the use of CE certified products. We are delighted to announce the Environmental Product Declaration (EPD) for our CE-marked, Alpha Hemihydrate flowing screed is now available online for download on EPD Ireland's Platform. Having an EPD secured against our screed product will ensure Fast Floor Screed Ltd will become a preferred supplier amongst sustainability-savvy specifiers for all green building projects.

With over 25 years flooring construction experience, we specialise in the supply and fit of Self Levelling Floor Screeds and have a range of products that will suit any Residential, UFH, Self Build, Renovation, Office, Care Home, Commercial or Industrial flooring project.

Our Self Levelling Screed is particularly suitable for applications over Under Floor Heating (UFH) and can be used in all types of cavity floor constructions, timber frame, timber joists suspended floors, concrete floors and upper floor concrete slabs. We have a comprehensive range of self-levelling flooring products to suit any depth required for your floor project.

To find out more or obtain a quote, please contact Fast Floor Screed Ltd – or view our extensive portfolio of recent Fast Floor Screed Flooring Case Studies of successfully completed jobs nationwide on our website.

The Fast Floor Screed benefits:

- CE certified products
- guaranteed, manufactured, supplied and installed by one company
- fully compliant installation to BS 8204-7
- virtually no shrinkage
- unrivalled track record over 1 million m² in Ireland to date
- foot traffic in as little as 6 hours
- a laitance-free screed surface
- a decade of tried and tested results
- accurately mixed and poured by our CE certified state-of-the-art Mobile Screed Factories.

Südanit 280 Alpha Hemihydrate Screed's advanced composition means that it reacts quickly with water, providing consistent, reliable drying characteristics and considerably faster drying times, enabling following trades to proceed without delay. This has the advantage of ensuring your project completes in a timely manner, offering your architect or designer flexibility. For your builder/contractor and floor covering specialist, it offers ease of installation on site.

Fast Floor Screed's Alpha Hemihydrate screed is particularly suitable for applications over Under Floor Heating (UFH) and cavity floors. Südanit 280 Alpha Hemihydrate Screed is a liquid self-compacting, self-flowing, self-levelling Screed which flows to fully encapsulate underfloor pipes or conduits and reduces the potential for air bubbles/pockets which can have an adverse effect on heat transfer.

Our Alpha Hemihydrate Screed can be installed in a heated floating-floor screed construction, uniquely, with the commissioned underfloor heating system up and running @ 25°C!

No Underfloor Heating, no problem!
We also supply a rapid drying Alpha Hemihydrate floor screed that dries, ready for floor covering in as little as 10 days!
